

Three-column osteotomy in cervicothoracic congenital deformity

Terry Jianguo Zhang M.D.

Department of Orthopedics
Peking Union Medical College Hospital

Cervicothoracic deformity

Definition

Spine deformity with apex at C7-T1

Manifestation

cosmetic problem

Torticollis

Head tilting

Prominence of scapula

Etiology

Congenital

Neurofibromatosis type-1

Cervicothoracic deformity

Definition

Spine deformity with apex at C7-T1

Manifestation

cosmetic problem

Torticollis

Head tilting

Prominence of scapula

Etiology

Congenital

Neurofibromatosis type-1

Cervicothoracic deformity

Simulated Surgery for a Patient With Neurofibromatosis Type-1 Who Had Severe Cervicothoracic Kyphoscoliosis and an Anomalous Vertebral Artery

Masashi Yamazaki, MD, PhD, Akihiko Okawa, MD, PhD, Takayuki Fujiyoshi, MD, PhD,
SPINE Volume 35, Number 9, pp E368–E373

Circumferential convex growth arrest by posterior approach for double cervicothoracic curves in congenital scoliosis

Ibrahim Obeid • Ayman Taieb • Jean-Marc Vital

Posterior-only Hemivertebra Resection for Congenital Cervicothoracic Scoliosis

Correcting Neck Tilt and Balancing the Shoulders

Zhonghui Chen, MD,* Yong Qiu, MD,* Zezhang Zhu, MD,* Song Li, MD,* Xi Chen, MD,† Liang Xu, MD,* and Xu Sun, MD*

16 of 18 total patients receive HV resection below T1!

Retrospective study(PUMCH)

30 cases	F/14 M/16
Age at surgery	11 (5-16) yrs
Type of the deformities	
<i>Failure of formation</i>	19
<i>Failure of segmentation</i>	4
<i>Mixed type</i>	7
Intraspinal anomalies	7(23.3%)
<i>Syringomyelia</i>	4
<i>Diastomyelia</i>	1
<i>Tethered cord</i>	2
<i>Meningocele</i>	2
Neurologic deficits	3

Radiological finding

Curve Pattern

Single CT curve 10

Double curve 20

CT curve + upper thoracic curve

Surgical Procedure

Cervicothoracic deformities

<i>HV resection</i>	21
<i>PVCR</i>	8
<i>PSO</i>	1

Level of osteotomy

<i>Cervical (C7)</i>	11
<i>Upper thoracic (T1)</i>	19

Thoracic curve **20/30**

<i>Posterior fusion</i>	2
<i>Growing rod</i>	2
<i>None surgery</i>	16

MEP of both upper and lower limbs!

Results

Correction of the cervicothoracic deformities (30)

Scoliosis (°) 55.3-15.3-16.4 (72.3%)
Kyphosis (°) 81.3-22.3-22.9 (72.6%)

Spontaneous correction of the thoracic curves (16)

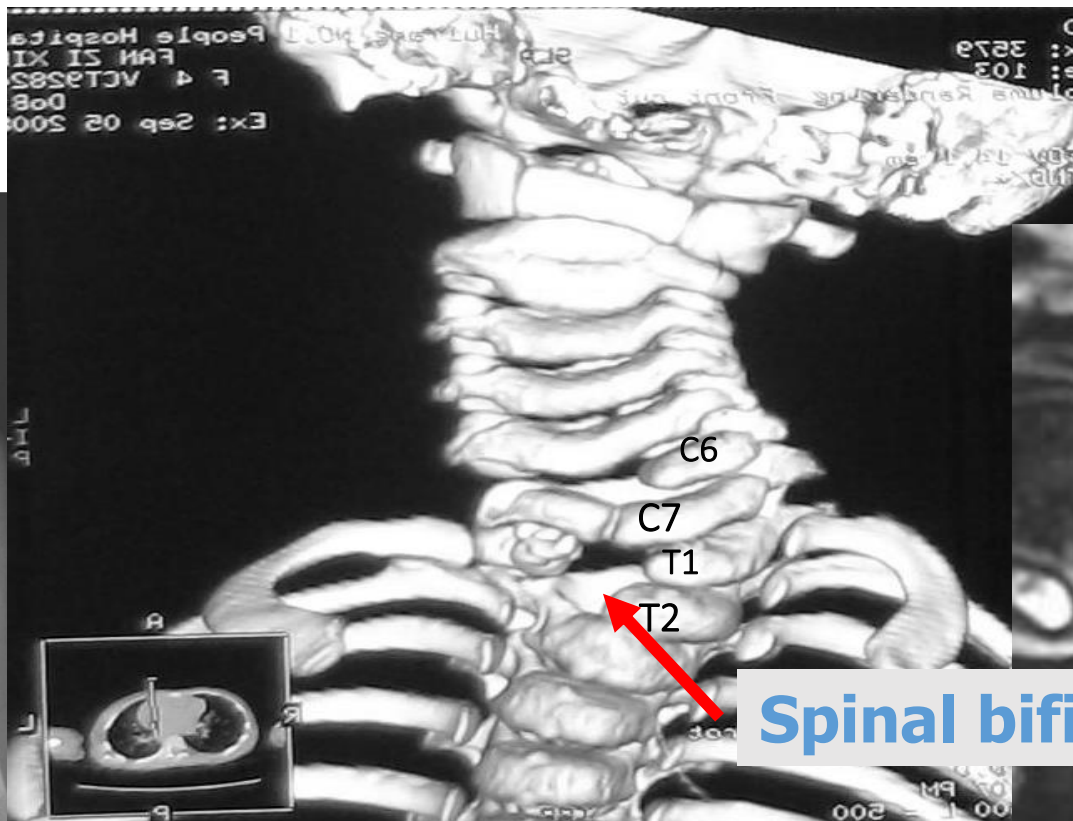

Scoliosis (°) 37.1-16.6-19.1 (55.2%)

Surgical correction of the thoracic curves (4)

Scoliosis (°) 80-25.5-27.3 (68.1%) –Fusion (2)
Scoliosis (°) 101-57-58.5 (43.6%)—Growing rod (2)

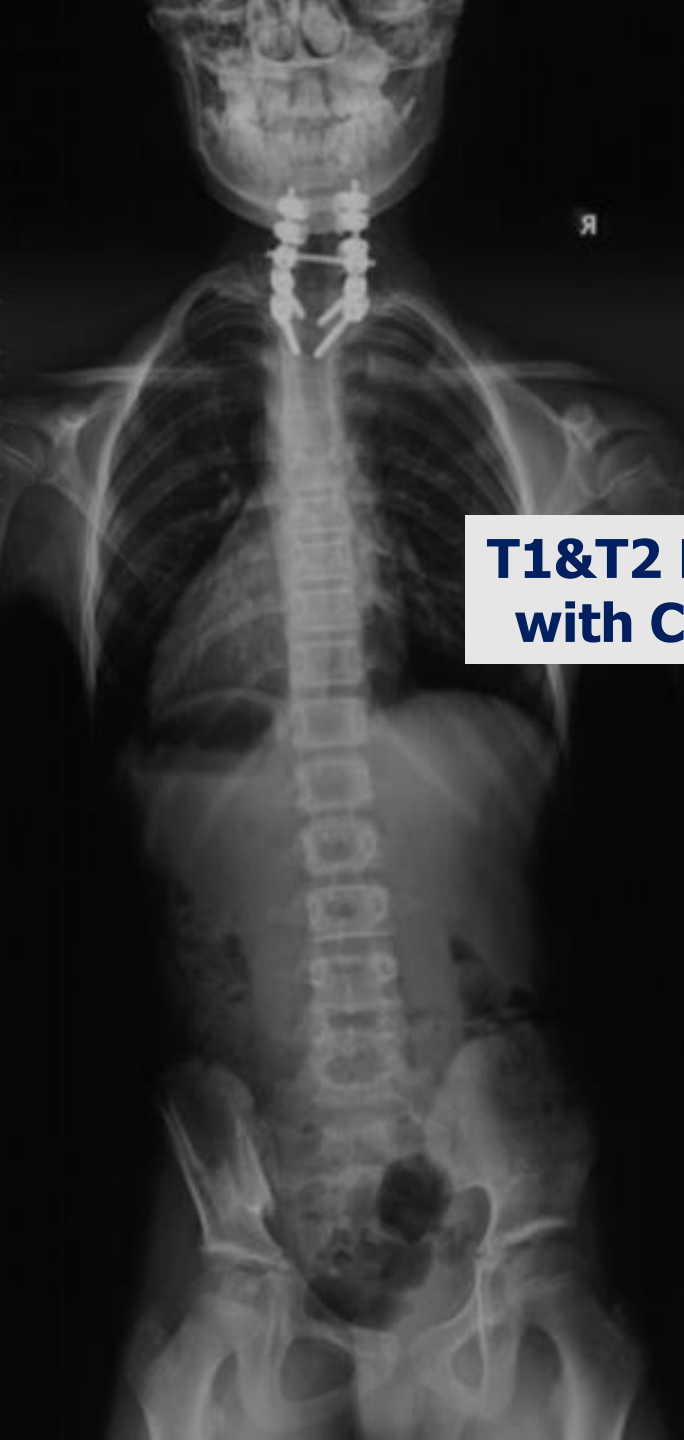

Case 1. F/5y

Spinal bifida

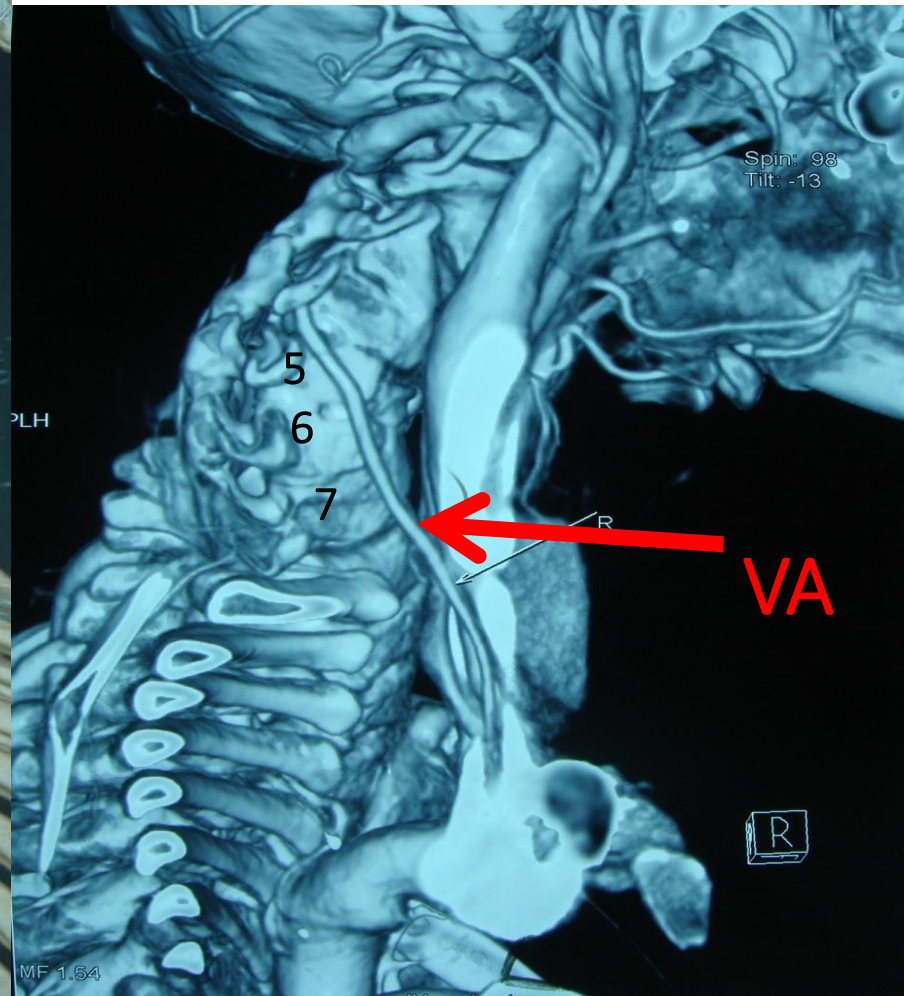

**T1&T2 HV resection
with C4-T4 fusion**

5y Post-op

Case 3. M/14y

Combined A-P hemivertebra resection & fusion (C5-6) and staged T6 PSO with fusion C4-L3

4y Post-op

Case 5. F/8y

T2,3 HV Resection+ staged growing rod insertion

2y Post-1st op

Post-op of 2nd lengthening

Complications (13) 44%

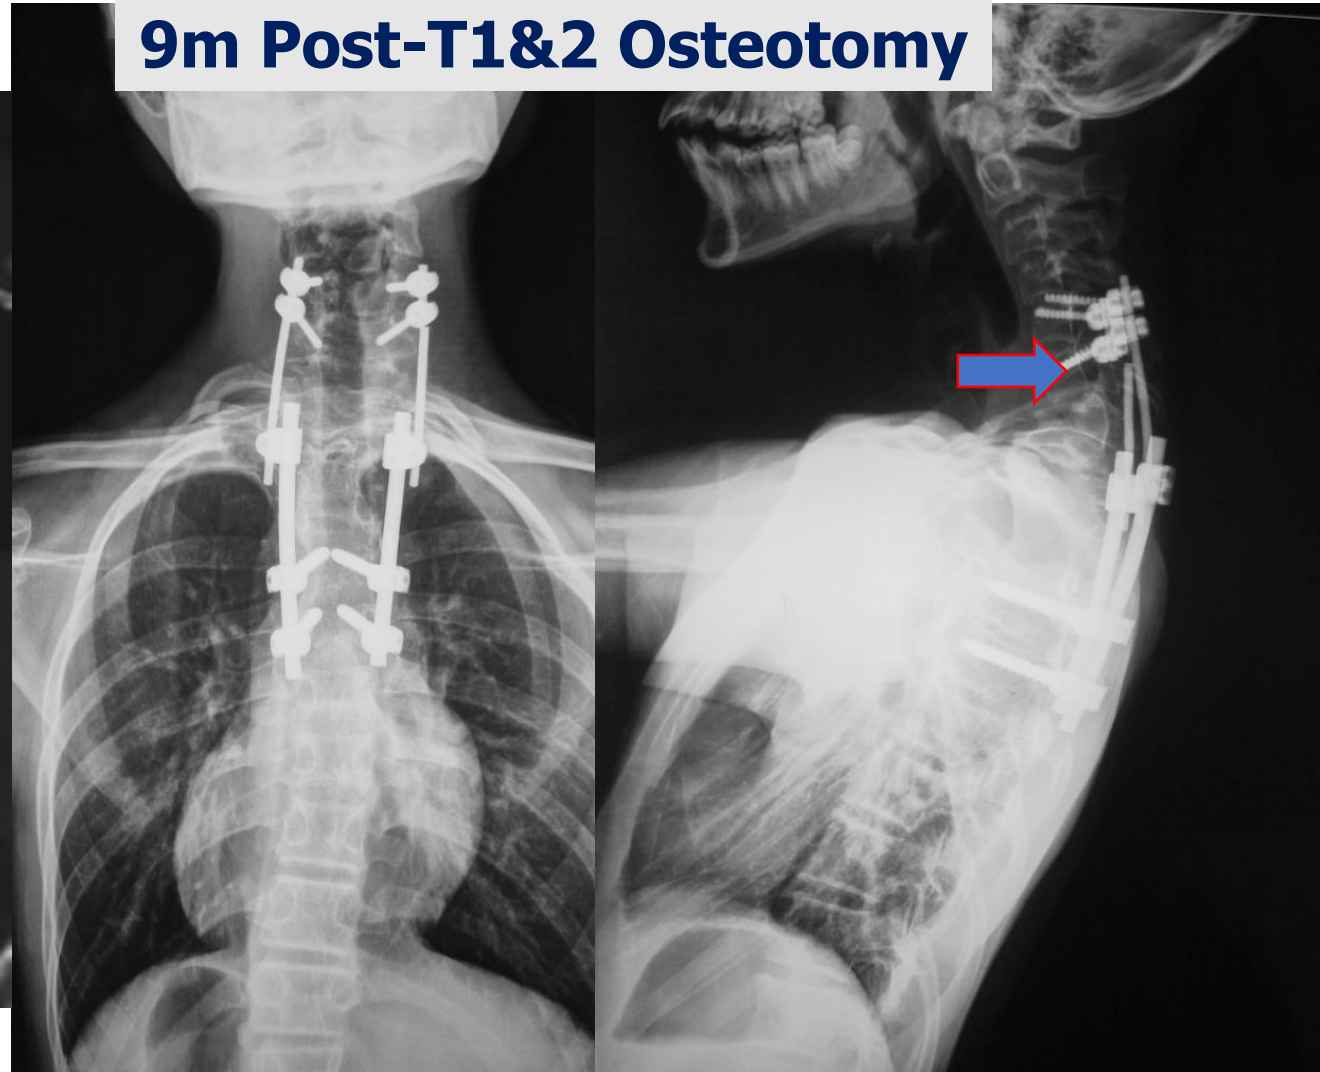

<i>Transient root injuries</i>	6	54%
<i>Transient cord injury</i>	1	
<i>Implant failures</i>	2	
<i>Hemothorax</i>	2	
<i>Wound delayed Union</i>	1	
<i>Atelectasis</i>	1	

M14 Walking difficulty

9m Post-T1&2 Osteotomy

Summary

Congenital cervicothoracic deformities

Not common but complicated deformities

*3 column osteotomy ----**Needed***

*Higher complications (40%)---**Transient Brachial plexus palsy***

CTA** is essential for **C7/T1** osteotomy to avoid **VA injury

Staged surgery usually needed when with structural thoracic curve

Instrumentation requires combination

*of **3.5mm** , **4.5mm** or **5.5mm** systems*

Thanks!
